PROTECTING CROPS

Soil Wealth
NURTURING CROPS

Match your main soil management aim to the southern Australian winter cover crops below

MAIN AIM	CROP	COMMENTS
Build soil structure	Ryegrass — a clear favourite	High root activity stabilises soil
	All other crops below will also build soil structure, but to a lesser extent	Foliage protects soil surface, mulches well and provides excellent organic matter input. Encourages mycorrhizal (VAM); good for some crops e.g. onions
Add cheap nitrogen	Peas	Use a rhizobium inoculate
	Clovers	For legumes to fix nitrogen nitrate levels in the soil should be below 150 kgN/ha
	Lupins	Expect legumes to fix between 100 and 200 kgN/ha — the bigger the crop, the more N fixed
	Vetch	
Recover and store left over fertiliser	Mix of fibrous and deep rooted crops e.g. ryegrass and brassica	Capture and store nitrogen to prevent leaching or loss to the air over winter
		Recycle nutrients from deep in the soil
Soil pest and disease control	Biofumigant brassicas (typically canola, B. Napus; Indian mustard, B. Juncea)	Use high glucosinolate varieties
		Aim to incorporate 100t/ha fresh biomass
		Incorporate when flowering, mulch finely and incorporate into the soil rapidly
Weed control	Fast early growth crops, eg wheat, barley, oats	Use 30% greater sowing rates than normal to outcompete weeds
	Brassicas	Brassicas can suppress weeds over and above the direct competition of the fast growing crops listed above it
Protect the soil surface from wind and water erosion	Ryegrass, wheat, barley, oats	High biomass crops good
		Management of the mulch varies depending on the following crop

When choosing a green cover crop also consider your overall rotation and potential pest and disease carry over.

This table provides an overview of winter cover crops for southern Australia.

Growers should seek additional information to tailor this to their specific situation.
