

# Field Event: Sustainable Soil Management

Learn about maximising crop returns through improved soil health and input use efficiency.

## Topics:

- **Rotations** - breaking the cropping cycle with cover crops, how to choose the right species, considerations for timing of planting, termination and termination methods.
- **Managing the cost of inputs** - with a focus on nitrogen, nitrogen budgeting, the use of legumes to supply nitrogen.
- **Soil biology** - its functions in the soil, practices that build it and degrade it, tools for measuring it, understanding it (including its challenges).
- **Improving soil health** - reduced tillage, building soil organic matter, structure, infiltration, soil biology.

## Meet the speaker:

DR KELVIN MONTAGU, SWICP

If you've got a question about cover crops or tillage, look no further than Kelvin. Kelvin works closely with growers to trial cover crops and biofumigants and examine their impacts on soil health; he also has extensive knowledge of soil biology and how growers can improve their irrigation and water management.

Just added:  
Horsch Cultro TC -  
double knife roller

**14 MARCH**  
**12PM-3PM**

INCLUDING LIGHT LUNCH  
BALDWIN PRODUCE  
315 BIRTHAMBA ROAD,  
SOUTH KOLAN, QLD
