

Building Better Soils: A Masterclass on Soil Biology

Dive deep into the science and practical management of soil biology to enhance crop productivity, nutrient cycling, and promote sustainable farming practices.

What to Expect:

Join the Soil Wealth ICP team for a hands-on, two-day Soil Health Masterclass designed specifically for vegetable and melon growers and agronomists with a basic understanding of soil biology.

LIMITED
TO 30
SPOTS

In-depth learning: On the topics of soil chemistry and physics, management strategies to enhance soil biology, nutrient availability, testing, and more.

Panel session: Engage with experts and growers exploring current challenges, solutions, and the future of soil health in production systems.

Field visit: See theory in action at our demonstration site, where you'll learn how nitrogen from legume and cereal cover crop residues is being used to support brassica crops.

Practical application: Develop your own action plan to enhance soil biology, gain hands-on experience of in-field tools to quantify soil biology and learn how to calculate nutrient cycling.
