

GLOBAL SCAN | FEBRUARY 2026

Biological Products Database

By APVMA registration, Product Type, Trade Name

About this database and how to use it

This Biological Products Database is a tool for growers that will assist with navigating the array of 'biological' products currently available to their farming business. We have compiled the information in response to questions from growers about available products. (Webinar on biopesticides available [here](#).)

Definition

'Biological' products (also called 'biologicals') are defined as those that are derived from living organisms (plants, animals, microorganisms, fungi). The term encompasses a diverse range of products, and this is a fast-growing segment of agricultural inputs (definition from www.croplife.org).

This database includes a column that indicates

whether products have APVMA registration (Australian Pesticides and Veterinary Medicines Authority). Registered products are known as 'Biological Crop Protection' products. If a product is used for crop protection (i.e., used as a biopesticide) it must be registered for use in the crop and situation it is applied in. Contact the APVMA or Hort Innovation for more information. For products not registered with the APVMA, potential effects suggested by manufacturers are NOT efficacy claims and data on potential for phytotoxicity or residues do not exist.

How was the database developed?

We have gathered information primarily from the manufacturers, via their websites and/or their representatives. We have attempted to reduce confusion by only including critical information for each product. We will include references to independent research as and when it becomes available.

The database is a work in progress

The database is a work in progress and is not comprehensive. We have not carried out reviews of science-based literature for each product. If a column or cell is blank, it does not mean that there is no information, just that it may not be publicly available (this is particularly the case for independent trial information). The database will be updated and published regularly as information becomes available.

Is anything missing?

If you know of any products or trial information we have not included, or details that are inaccurate or incomplete, please either complete the spreadsheet at the bottom of this [webpage \(www.soilwealth.com.au/resources/global-scan-and-reviews/biological-products-database/\)](http://www.soilwealth.com.au/resources/global-scan-and-reviews/biological-products-database/) and/or get in touch - rm@rmcg.com.au.

DISCLAIMER: VERY IMPORTANT

This document does not include or offer advice of any kind. It is a collection of publicly available information. Very few products have been registered by the APVMA, a process that involves rigorous independent testing of efficacy, residues, phytotoxicity and potential effects on flora, fauna and people. We do not endorse any products and the database is not an exhaustive list. To the best of our knowledge the information is correct at the time of publishing.

The following explanations of 'Source' and 'Product Type' have been developed to provide clarity and aid with interpretation of the Biological Products Database. Some products do not fit neatly within these, where this is the case, the aim has been to provide the best fit for the product details available.

BIOLOGICAL PRODUCTS DATABASE – EXPLANATIONS – SOURCE

<p>microbial</p>	<p>Microbial products are products derived from various small, simple organisms. Microbial products may contain the organisms themselves and/or the metabolites they produce. Microbial products generally contain or are derived from four different subcategories:</p> <ul style="list-style-type: none"> • Bacteria - may prevent plant diseases by outcompeting plant pathogens in the rhizosphere, producing anti-fungal compounds, and by promoting plant and root growth. Examples of beneficial bacteria include <i>Bacillus subtilis</i>, <i>Bacillus pumilus</i>, <i>Pseudomonas</i> spp., and <i>Streptomyces</i> spp. • Protozoa - while most protozoa feed on bacteria and decaying organic matter, a wide range of protozoan species are insect parasites. For example, the protozoan <i>Nosema locustae</i> is known to be a natural biocontrol agent of many grasshopper species. • Viruses - can be very specific to particular insects or arthropods. For example, certain viruses can kill only one or a few species of Lepidoptera larvae (caterpillars), making them good candidates for management of crop pests with minimal off-target effects. The granulovirus of the codling moth (<i>Cydia pomonella</i>), or CpGV, is a good example of a commercially successful viral insecticide. • Yeasts - may work through competition with pathogens, e.g. for nutrients. For example, <i>Candida oleophila</i> Strain O, has been developed as an effective biocontrol for post-harvest fruit rots. It is applied to apples and pears after harvest — but before storage — to control particular fungal pathogens causing post-harvest decay such as grey mould (<i>Botrytis cinerea</i>) and blue mould (<i>Penicillium expansum</i>). <i>Candida oleophila</i> Strain O works primarily through competition for nutrients and pre-colonisation of plant wound sites.
<p>plant extract</p>	<p>Water- or solvent-based plant extracts or essential oils (EOs) can contain valuable natural products, many of which can be used safely in pest and disease control due to their ability to degrade quickly. An important consideration is that EOs and plant extracts are biologically unstable as they are easily destroyed by environmental pH, oxygen, light, and moderate temperatures. EOs exhibit poor aqueous solubility and high volatility in general. Many extracts or EO biopesticides are often used without deeply understanding their mode of action. Water- or solvent-based extracts and EOs can improve plant resistance to biotic and abiotic stressors, and can be involved in metabolic processes that control plant tolerance to these stressors.</p>
<p>amino acids</p>	<p>Amino acid products are manufactured either by hydrolysis or enzymatic treatment of animal or plant protein feedstock. Amino acids are readily absorbed, transported, and utilised as a source of nitrogen and carbon for plants. This saves the energy expended by the plant to reduce organic matter, synthetic nitrates and ammonia into amino acids. Some amino acids are efficient metal ion chelators which can help with metal ion nutrient uptake and help protect plants from toxic levels of metal ions.</p> <p>Amino acids also function as biostimulants for plants, playing important roles in enhancing plant productivity, especially under abiotic and biotic stress conditions. Refer to https://www.growerssecret.com/amino-acids-as-biostimulants</p>

BIOLOGICAL PRODUCTS DATABASE – EXPLANATIONS – SOURCE (CONTINUED)

seaweed extract	<p>An extract produced from seaweed. It is usually a concentrated organic product (usually liquid, but can be soluble granules) that can be diluted and applied to seedlings and transplants as well as larger plants – see comments below for the specific functions of humic and fulvic acids.</p> <p>Nutrient content: Seaweed is a rich source of many essential plant nutrients such as nitrogen, phosphorus, potassium, and trace elements like iodine, zinc, and iron which can improve soil fertility.</p> <p>Microbial growth: Seaweed can act as a source of carbon and energy for microorganisms in the soil, stimulating their growth and activity.</p> <p>Root growth: Some studies suggest that seaweed extracts can have a positive impact on root growth and root health, which can improve overall plant growth and vigour.</p> <p>Disease suppression: The compounds present in seaweed can have an antimicrobial effect, inhibiting the growth of certain pathogens and helping to suppress plant diseases.</p> <p>Alginates: Seaweed contains alginates, a complex carbohydrate that can form gels in soil, which can improve soil structure and water-holding capacity, making it more conducive to healthy microbial growth.</p> <p>Hormones: Seaweed contains growth hormones like cytokinins and auxins that can promote root growth, cell division and elongation, which can help plants to better cope with environmental stress.</p>
fish extract	<p>Fish extract (also emulsion, or fish fertiliser) for plants, is a fast-acting, organic liquid product made from the by-products of the fishing and aquaculture industries. It is rich in nitrogen, phosphorus, and potassium, plus trace elements such as calcium, magnesium, sulphur, chlorine, and sodium.</p>
seaweed/fish mix	<p>A mix of seaweed and fish extracts described above.</p>
humic/fulvic acid	<p>When plants and animals are decomposed by bacteria, humic substances are released and are found naturally in soils. Humic substances are composed of: relatively small fulvic acids that dissolve in both acid and alkaline environments, larger humic acids that are soluble under alkaline conditions, and very large humins that are insoluble. Humic acids can be 100 000 times larger than fulvic acids. Humic acids used in soil amendments are often extracted from brown coal.</p> <p>Humic acid</p> <p>Humic acids can aid with nutrient cycling, microbial growth and disease suppression through the following mechanisms:</p> <p><u>Nutrient cycling:</u> Humic acids can help to make nutrients such as nitrogen and phosphorus more available to plants by chelating or complexing them, making them more accessible to plant roots.</p> <p><u>Microbial growth:</u> Humic acids can act as a source of carbon and energy for microorganisms in the soil, stimulating their growth and activity.</p> <p><u>Disease suppression:</u> Humic acids can also have an antimicrobial effect, inhibiting the growth of certain pathogens and helping to suppress plant diseases.</p> <p>Fulvic acid</p> <p>Fulvic acid may stimulate root growth and affect root function to exude organic acids that can lead to increased nutrient uptake.</p> <p>Fulvic acid can also help to increase plant nutrient uptake by chelating (binding) minerals and other nutrients. Chelated minerals are easier for the plant to absorb and use.</p>

BIOLOGICAL PRODUCTS DATABASE – EXPLANATIONS – PRODUCT TYPES

fungicide	Product to control the growth of fungi and fungal spores. They can be made from a variety of chemical compounds including synthetic chemicals, botanicals, and microbial pesticides.
herbicide	Product to kill or control weeds. They can be made from a variety of chemical compounds, including synthetic chemicals, botanicals, and microbial pesticides. Some herbicides target specific weeds or groups of weed (e.g. grasses), while others have a broader spectrum of activity.
insecticide	Product to kill or control a population of insects. They can be made from a variety of chemical compounds, including synthetic chemicals, botanicals, and microbial pesticides. Some insecticides target specific insects, while others have a broader spectrum of activity.
miticide	Product to kill or control a population of mites. They can be made from a variety of chemical compounds, including synthetic chemicals, botanicals, and microbial pesticides.
pest deterrent	<p>A plant pest deterrent is a substance or method used to prevent or discourage the presence of pests. These pests can include insects, mites, nematodes, and other animals that feed on plants or cause damage to the foliage, roots, or fruit of plants. Plant pest deterrents can include a variety of chemical and non-chemical methods, such as:</p> <ul style="list-style-type: none"> • Biological controls, such as the use of predators or pathogens that feed on or kill pests • Botanical repellents, such as certain essential oils or plant extracts that have been shown to repel certain pests and also • Physical barriers, such as screens or nets, which can physically prevent pests from reaching the plants.
disease suppressant	<p>A plant disease suppressant is a substance or method that is used to prevent or reduce the incidence or severity of plant diseases. These diseases can be caused by a variety of pathogens, such as bacteria, fungi, viruses, and nematodes. Disease suppressants can include a variety of chemical and non-chemical methods, such as:</p> <ol style="list-style-type: none"> 1. Biological controls: The use of beneficial microorganisms such as bacteria or fungi that can outcompete or inhibit the growth of pathogens in the soil or on the plant surface. 2. Botanical extracts and essential oils: Some plant extracts and essential oils have been found to have antimicrobial properties, which can help to suppress the growth of pathogens. <p>Products should be supported via:</p> <ol style="list-style-type: none"> 1. Crop rotation: rotating crops can help to reduce the build-up of pathogens in the soil, which can help to reduce the incidence of diseases. 2. Cultural controls: Sanitation practices, such as removing and destroying infected plant debris, can help to reduce the incidence of diseases. 3. Nutrient management: Proper nutrition can help plants to better cope with disease stress and improve overall plant health. 4. Environmental control: Manipulating the environment by controlling temperature, humidity, light intensity can help plants to better cope with pathogens.

BIOLOGICAL PRODUCTS DATABASE – EXPLANATIONS – PRODUCT TYPES (CONTINUED)

<p>stress resistance</p>	<p>There are several ways to increase stress resistance in plants; the following may be used in products:</p> <ol style="list-style-type: none"> 1. Microorganisms: Some microorganisms can promote plant growth and stress tolerance by improving nutrient uptake, protecting against pathogens, and producing plant growth-promoting compounds. 2. Hormonal treatments: Some phytohormones such as cytokinins and gibberellins have been shown to increase stress tolerance in plants by promoting cell division and elongation. <p>However, sole reliance on products will not be successful. Other methods that should be used at the same time are:</p> <ol style="list-style-type: none"> 1. Variety selection (breeding): Selecting and breeding plants that are naturally more tolerant to stress conditions such as drought, heat, cold, and disease. 2. Proper nutrition: Providing plants with adequate and balanced nutrition can help them to better cope with stress. 3. Water management: Proper irrigation and drainage can help plants to better tolerate drought stress and prevent effects of waterlogging. 4. Mulching: Mulching, e.g. planting into cover crop residues, can help to reduce soil moisture loss, moderate soil temperature and suppress weed growth, which can help plants to better tolerate stress conditions. 5. Crop rotation: rotating crops can help to reduce the build-up of pests and diseases, as well as improve soil health, which can help plants to better tolerate stress conditions. 6. Environmental control: Manipulating the environment by controlling temperature, humidity, light intensity can help plants to better tolerate stress conditions.
<p>crop nutrition product</p>	<p>Crop nutrition products can include a variety of chemical and organic compounds that provide plants with macronutrients and/or micronutrients (such as zinc, copper, and iron). These products can be applied to soil or foliage in various forms such as granular, liquid, and foliar sprays.</p>
<p>growth stimulant &/or regulator</p>	<p>A plant growth stimulant is a substance or a microorganism that when applied to plants, can improve their growth and development. Plant growth stimulants can be in the form of enzymes, minerals, or microorganisms that are applied to the soil or the foliage of plants. They can be used to improve crop yields, and/or increase the tolerance of plants to environmental stress. Some examples of plant growth regulators include auxins, cytokinins, gibberellins (which are produced by plants) or humic acids which naturally occur in soils.</p>
<p>soil biology stimulant</p>	<p>A soil biology stimulant is a substance that is used to enhance the diversity and activity of microorganisms in the soil, which can improve soil health and plant growth. Soil biology stimulants can include a variety of microorganisms such as bacteria, fungi, and protozoa, as well as organic compounds such as humic acids (see 'Source' definitions above) and seaweed extracts. The microorganisms help to break down organic matter, improve nutrient cycling, and promote root growth, leading to healthier and more productive plants. Soil biology stimulants can be applied through soil drench, foliar spray or seed coating.</p>
<p>wetting agent</p>	<p>A chemical added to reduce the surface tension of a liquid and allow it to spread more easily and evenly over plant surfaces (reduces beading). Also known as a surfactant.</p>

Trade Name	Source	Registered Product Type (APVMA Registered)	Product type	Ingredient(s)		Use		Crop	Manufacturer	Formulation	Australian Certified Organic	pH	Analysis	Trial Information
				Has been used as / for (not registered)	Active Ingredient(s) (APVMA Registered Products)	Main ingredient(s) of non registered products	Registered Use (APVMA Registered)							
Actinovate Biofungicide	microbial	fungicide	-		<i>Streptomyces lydicus</i> strain WYEC 108	-	Preventative control of foliar diseases (incl. powdery mildew) and soilborne diseases (incl. Fusarium wilt , Rhizoctonia root rot, Pythium damping off)	soil biology stimulant (product is not APVMA registered for this application)	Novozymes BioAg Limited (Novozymes Biologicals Ltd), Canada / Novozymes Australia Pty Ltd, NSW	powder	Yes	n/a	<i>Streptomyces lydicus</i> strain WYEC 108 at 1 x 10 ⁷ CFU/g	Trials undertaken by manufacturer (protected data with APVMA)
Botector	microbial	fungicide	-		<i>Aureobasidium pullulans</i> strains DSM 14940 & 14941	-	control (preventative) of grey mould (Botrytis cinerea), suppression of sclerotinia (Sclerotinia sclerotiorum); other diseases as per label	-	Nufarm Australia Ltd, Victoria	granular	Yes	-	<i>Aureobasidium pullulans</i> strains DSM 14940 & 14941 at minimum 2.5 x 10 ⁹ CFU/g	-
Serenade Opti	microbial	fungicide	-		<i>Bacillus amyloliquefaciens</i> strain QST 713	-	bacterial spot (<i>Xanthomonas</i> spp.)	soil biology stimulant (product is not APVMA registered for this application)	Bayer CropScience	granular	Yes	4.5 - 8.5	<i>Bacillus amyloliquefaciens</i> strain QST 713 1.3x10 ¹⁰ CFU/g	https://www.crop.bayer.com.au/products/bayer-biologics/serenade-opti#tab-4
Serenade Prime	microbial	fungicide	-		<i>Bacillus amyloliquefaciens</i> strain QST 713 (1.34%)	-	bacterial spot (<i>Xanthomonas</i> spp.), rhizoctonia root rot / black scurf (<i>Rhizoctonia solani</i>)	soil biology stimulant (product is not APVMA registered for this application)	Bayer CropScience	liquid	Yes	4.5 - 8.5	<i>Bacillus amyloliquefaciens</i> strain QST 713 1.3x10 ¹² CFU/g	https://www.crop.bayer.com.au/products/bayer-biologics/serenade-prime#tab-3
Serifel Biofungicide	microbial	fungicide	-		Enzyme alpha-amylase (from <i>Bacillus amyloliquefaciens</i> strain MBI600, formerly named <i>Bacillus subtilis</i> strain MBI600)	-	Preventative control of <i>Botrytis cinerea</i> in grapes and strawberries + minor use permits for control of soil-borne and foliar pathogens in non-food nursery stocks	Preventative control of soilborne diseases (incl. Pythium damping off, Fusarium wilt, Verticillium wilt, Phytophthora root rot, Rhizoctonia root/crown rot, Sclerotinia stem rot) and foliar diseases (incl. anthracnose, powdery mildew, grey mould) in vegetable crops and others - product is not APVMA registered for these applications	BASF Australia Ltd.	powder	Yes	n/a	Enzyme alpha-amylase from <i>Bacillus amyloliquefaciens</i> strain MBI600 at 110 g/kg (> 5.5 x 10 ¹⁰ CFU/g)	Trials undertaken by Eurofins in grape and strawberry (+ protected data of manufacturer with APVMA)
Timorex Gold	plant extract	fungicide	-		Tea tree oil (<i>Melaleuca alternifolia</i>)	-	Preventative control of foliar diseases (powdery mildew, Botrytis grey mould)	-	Stockton (Israel) Ltd, Israel / Syngenta Australia Pty Ltd, NSW	liquid	No	8.9 - 9.6	Tea tree oil (<i>Melaleuca alternifolia</i>) at 222 g/L (28% w/v), ethanol (4% w/v)	Trials undertaken by manufacturer (protected data with APVMA)
Nogall	microbial	fungicide (not registered for vegetables)	-		<i>Agrobacterium radiobacter</i> var. <i>radiobacter</i> strain K1026	-	Preventative control of crown gall disease (<i>Rhizobium radiobacter</i> , <i>R. rhizogenes</i>) in stone fruit, nut trees, ornamentals	-	Bio-Care Technology Pty Ltd (Bio-Care); Becker Underwood Pty Ltd, NSW; BASF Australia Ltd, Victoria	powder	No	n/a	<i>Agrobacterium radiobacter</i> var. <i>radiobacter</i> strain K1026 at 1 x 10 ⁹ CFU/g peat	-
Intervene	microbial	fungicide (not registered for vegetables)	-		Polyoxin D zinc salt. Polyoxin D is a fermentation product of <i>Streptomyces cacaoi</i> subsp. <i>asoensis</i> . The zinc salt of Polyoxin D may be classified as synthetic because of an additional purification step.	-	control of grey mould (<i>Botrytis cinerea</i>), powdery mildew, Rhizopus fruit rot	-	Nufarm Australia Ltd, Victoria	granular	No	7.5 (1% solution, 23.2 °C)	Polyoxin D zinc salt at 113 g/kg	-
Bioweed Organic	plant extract	herbicide	-		Pine oil (not specified)	-	Control of wide range of weeds, see label	-	GreenPro Solutions Pty Ltd, Queensland	liquid	Yes	7	Pine oil 680 g/L	Protected trial (efficacy and safety) data with APVMA
Agree WG biological insecticide	microbial	insecticide	-		<i>Bacillus thuringiensis</i> Berliner subsp. <i>aizawai</i>	-	armyworm cabbage moth cabbage white butterfly cotton budworm or bollworm grapevine moth light brown apple moth looper moth native budworm or bollworm painted vine moth pear looper soybean looper	amenity tree cereal grain cotton forestry fruit crop herb macadamia oilseed crop ornamental tobacco turf vegetables - see label vine	Certis U.S.A. Bio TX500 Humus Extract	composite/blend	not registered	soil biology stimulant	not registered	Micro-organisms (not specified), humic acids, enzymes, plant hormones and minerals	not registered	Pre-plant soil conditioner/fertiliser to stimulate beneficial microbial activity in the root zone and biological processes. Also applied as foliar fertiliser.	all crops	YLAD Living Soils, New South Wales	liquid	Yes	-	not supplied	Independent 3 year trial results available with manufacturer
Bio-Hum Concentrated Fertiliser Additive	composite/blend	not registered	soil biology stimulant	not registered	Microbial inoculum: <i>Enterococcus faecalis</i> , <i>Lactobacillus</i> spp., <i>Pediococcus pentosaceus</i> , <i>Aspergillus</i> spp., <i>Saccharomyces cerevisiae</i> , <i>Bacillus subtilis</i> subsp. <i>Humic and fulvic acids</i>	not registered	Pre-plant soil conditioner/fertiliser additive to stimulate beneficial microbial activity in the root zone and biological processes.	all crops	Biolink 4 Plants Pty Ltd, Victoria	liquid	Yes	n/a	not supplied	
BioMAX MicroLife Inoculum + Food	composite/blend	not registered	soil biology stimulant	not registered	Ingredients for fermentation process - Microbial inoculum: Seven bacterial species: <i>Azospirillum brasilense</i> , <i>Bacillus subtilis</i> , <i>B. megaterium</i> , <i>Cellulomonas cellasea</i> , <i>Pseudomonas fluorescens</i> , <i>P. putida</i> , <i>Streptomyces cellulosa</i> ; Two fungal species: <i>Trichoderma harzianum</i> , <i>Yarrowia lipolytica</i> ; humic acid. Liquid food source: yeast (not specified) extract, potato starch, peptone, molasse, malt extract, inorganic salts, thiamine HCl	not registered	Use as fermented product - Foliar spray alone or generally a foliar spray with nutrition, it can also be used as a direct inject or in drip irrigation (fertigation) combined with nutrient applications. It is also added to manufacturer's foliar nutrition products (incl. HumiPLEX, NutriMAX liquid range) and is used to inoculate manufacturer's brown coal based BioMax BioLogic Blend	all crops	LawrieCo Pty Ltd trading as LawrieCo, South Australia	powder + liquid	No	6.7 - 7.5 (at 20 °C, 50 g/L water)	Inoculum ingredients expressed as w/w%: Bacterial and fungal species 15 - 20%, Wheat germ 25 - 30%, Humic acid (potassium salt) < 2%, inert carrier (excipient) 50 - 60%. Liquid food ingredients expressed as w/w%: water 50 - 60%, yeast extract 5 - 10%, potato starch 5 - 10%, peptone 5 - 10%, molasses 5 - 10%, malt extract < 5%, inorganic salts < 5%, thiamine HCl < 0.5%	
BIOWISH Crop 16-40-0	composite/blend	not registered	soil biology stimulant	not registered	Microbial inoculum: <i>Bacillus subtilis</i> , <i>Bacillus amyloliquefaciens</i> , <i>Bacillus licheniformis</i> , <i>Bacillus pumilus</i> . Diammonium phosphate, diatomaceous earth	not registered	Soil conditioner/fertiliser supplement through fertigation or (foliar) spray to stimulate beneficial microbial activity in the root zone and biological processes.	all crops	BIOWISH Technologies Inc., USA / Enviro Nutrition Pty Ltd, Queensland	powder	No	7.9 - 8.5 S.L	Bacterial live cultures (total < 1.0%): <i>Bacillus subtilis</i> 1.0 x 10 ⁸ CFU/g, <i>B. amyloliquefaciens</i> 1.0 x 10 ⁸ CFU/g, <i>B. licheniformis</i> 1.0 x 10 ⁵ CFU/g, <i>B. pumilus</i> 1.0 x 10 ⁶ CFU/g. Diammonium phosphate 93.0 - 97.0%, Diatomaceous earth 3.0 - 5.0%, Guaranteed Analysis: ammoniacal nitrogen 16.0%, available phosphate 40.0%	https://biowishtechnologies.com/pro-duct/crop-16-40-0/

Agrospeed Fusion	microbial	not registered	soil biology stimulant	not registered	phosphorus and <i>Bacillus amyloliquefaciens</i>	not registered	crop health	all crops	AgroNutrition	granular	No		not supplied	-
Amylis	microbial	not registered	soil biology stimulant	not registered	<i>Bacillus amyloliquefaciens</i>	not registered	nitrogen fixation	all crops	AgroNutrition	liquid	Yes (NASAA)	6	10 ⁹ cfu/mL	-
Baseos	microbial	not registered	soil biology stimulant	not registered	<i>Bacillus megaterium</i> , <i>Streptomyces beta-vulgaris</i> , <i>Burkholderia</i> sp.	not registered	phosphorous solubilisation	all crops	AgroNutrition	liquid	Yes (NASAA)		10 ⁹ cfu/ml	-
Connectis	microbial	not registered	soil biology stimulant	not registered	<i>Rhizophagus irregularis</i>	not registered	endomycorrhizal symbiosis	all crops	AgroNutrition	liquid	Yes (NASAA)	5.4	1 000 spores/ml	Connectis trial conducted in strawberries by Staphyt AUS
Digester	microbial	not registered	soil biology stimulant	not registered	Fermentation extract (<i>Pseudomonas putida</i>) and plant nutrients	not registered	Breakdown organic matter	all crops	BioStart	liquid	No	4	from label - bacteriocins, enzymes, signal molecules and secondary metabolites from the fermentation of beneficial bacteria; from manufacturer - Manganese, zinc, potassium, boron, phosphorous, nitrogen, amino acids	https://biostart.com.au/wp-content/uploads/sites/4/2022/10/BIO-5-179-Digester-Technical-Sheet-Two-Page-web.pdf
EndoFuse	microbial	not registered	soil biology stimulant	not registered	4 Endomycorrhizal fungi + 91.27% Inert ingredients (carrier)	not registered	mycorrhizae	all broadacre mycorrhizal crops	Sumitomo Chemical Australia Pty Ltd	liquid	No	n/a	<i>Glomus intraradices</i> , <i>Glomus mosseae</i> , <i>Glomus aggregatum</i> , <i>Glomus etunicatum</i> all at 5625 propagules/ml, Humic acid from leanoardite 15%, Inert ingredients 91.27%	https://sumitomo-chem.com.au/sites/default/files/interature/endofuse_intro_and_trial_data_april_2020_lower_v111.pdf
GO Isolates	microbial	not registered	soil biology stimulant	not registered	humic acids, <i>Bacillus amyloliquefaciens</i> , <i>Bacillus subtilis</i>	not registered	out-competing soil-borne pathogens	all crops	BioFlora, Queensland	liquid	Yes	n/a	not supplied	-
Great Land Plus	microbial	not registered	soil biology stimulant	not registered	<i>Lactobacillus parafarraginis</i> , <i>Lactobacillus buchneri</i> , <i>Lactobacillus rafi</i> , <i>Lactobacillus casei</i> , <i>Acetobacter</i> sp., <i>Candida</i> sp.,	not registered	crop health, nutrient use efficiency	all crops	Terragen	liquid	yes	3 - 5	Lactobacilli >4x10 ⁷ CFU/mL. Water, potassium humate & molasses	https://www.terragen.com.au/plant-health/
MeliorAdapt	microbial	not registered	soil biology stimulant	not registered	<i>Bacillus amyloliquefaciens</i> , <i>Streptomyces</i> sp., <i>Trichoderma harzianum</i> .	not registered	help accelerate breakdown of mulches, crop residues	horticulture crops	New Edge Microbials Pty Ltd, NSW	liquid	No	6.9	not supplied	-
Mycogel	microbial	not registered	soil biology stimulant	not registered	mycorrhizal fungi (<i>Rhizophagus irregularis</i>)	not registered	soil health, nutrient uptake	most crops	Kimitec	liquid gel	Yes	n/a	<i>Rhizophagus irregularis</i> in sterile gel; 50,000 CFU/mL	https://sustainablefarming.com.au/trials-database/
Mycorrcin	microbial	not registered	soil biology stimulant	not registered	Fermentation extract (<i>Pseudomonas putida</i>) and plant nutrients	not registered	Root growth and health	all crops	BioStart	liquid	No	4	not specifically listed but manufacturer advises contains - Manganese, zinc, potassium, boron, phosphorous, nitrogen, amino acids	https://biostart.com.au/mycorrcin/
Nucleon Liquid Fertiliser Enzyme Additive	microbial	not registered	soil biology stimulant	not registered	enzymes - lipase, mannanase	not registered	enhances nutrient availability to soil microbes and plant roots resulting in improvements in soil and plant health, growth and yield.	all crops	Elemental Enzymes	liquid	No	5.0 - 10.0	Lipase 750mU/mL, Mannanase 350U/mL	https://sustainablefarming.com.au/product/nucleon/
Optyz	microbial	not registered	soil biology stimulant	not registered	<i>Bacillus mucilaginosus</i> I-4361, <i>Ochrobactrum</i> sp. I-4362	not registered	seed treatment	all crops	AgroNutrition	liquid	No	5.5	10 ⁷ cfu/mL	-
Synergy	microbial	not registered	soil biology stimulant	not registered	<i>Bacillus subtilis</i> , magnesium	not registered	nutrient availability, soil biology	all crops	Seawins	powder	SXC certified	5.5 - 8.5	<i>Bacillus subtilis</i> (1.0-1.5) x 10 ¹⁰ CFU/g, magnesium 13.5%, calcium 0.2%, green seaweed polysaccharide 1%, alginate 0.13%	-
Benefit PZ	plant extract	not registered	soil biology stimulant	not registered	contains nucleic acids, vitamins, proteins and free amino acids	not registered	crop health, stress tolerance	all crops	Valagro	liquid	No	6.8	Nitrogen 4%, Potassium 6.6%, Organic carbon (soluble in water) 10%	-
Megafof	plant extract	not registered	soil biology stimulant	not registered	contains vitamins, amino acids, proteins, betaines and growth factors	not registered	crop health, stress tolerance	all crops	Valagro	liquid	No	6.5	Nitrogen 3%, Potassium 6.6%, Organic carbon (soluble in water) 9%	-
Radifarm	plant extract	not registered	soil biology stimulant	not registered	derived from urea, potassium acetate, kelp extract and sugar beet vinasse, zinc-EDTA	not registered	root growth	all crops	Valagro	liquid	No	5.0	Nitrogen 3%, Potassium 8%, Zinc 0.10%, Organic carbon (soluble in water) 10%	-
Sweet	plant extract	not registered	soil biology stimulant	not registered	calcium, magnesium, trace elements and specific polysaccharides.	not registered	ripening	all crops	Valagro	liquid	No	3.5	Calcium 7.2%, Magnesium 0.6%	-
BioMAX Kelp Powder	seaweed extract	not registered	soil biology stimulant	not registered	Soluble seaweed (<i>Ascophyllum nodosum</i>) extract powder	not registered	enhanced soil microbial activity, soil and plant health	vegetable crops (legumes, onions, carrots, potatoes) + others	LawrieCo Pty Ltd trading as LawrieCo, South Australia	powder	Yes	10 - 10.5 (at 20 °C, 200 g/L)	Ingredients expressed as w/w%: <i>Ascophyllum nodosum</i> extract > 93.5%, water < 6.5%. All %=w/w%: Nitrogen > 0.5%, Potassium (as oxides) > 12.4%, Potassium (as organic) > 1.7%, Sulphur 1.0 - 2.0%, Calcium 0.2 - 0.5%, Magnesium 0.2 - 0.6%, Boron 0.0075%, Iron 0.02%, Manganese 0.004%, Copper 0.001%, Zinc 0.005%, Carbon (organic) > 20%	-
FertiGold	seaweed extract	not registered	soil biology stimulant	not registered	green seaweed <i>Enteromorpha prolifera</i>	not registered	reduced plant stress, increased microbial activity, soil structure	all crops	Seawins	powder	SXC certified	5 - 7	Seaweed polysaccharides 45%, alginate 21%, nitrogen (N) 1%, potassium (K) 4.6%, calcium (Ca) 1.9%, iron (Fe) 0.13%, boron (B) 0.03%, organic matter 40%	-
Sea Brown Powder	seaweed extract	not registered	soil biology stimulant	not registered	brown kelp (<i>Laminaria [Saccharina] japonica</i>)	not registered	reduced plant stress, increased microbial activity	all crops	Seawins	powder	SXC certified	8 - 10	Nitrogen (N) 1.5%, phosphorus (P) 1.5%, potassium (K) 16.6%, iron (Fe), 0.26%, boron (B) 0.19%, alginate 15%, organic matter 50%	-
Aton Mo	amino acids	not registered	stress resistance	not registered	Amino Acids + Molybdenum	Not Registered	Reduce abiotic stress and increase Mo absorption to promote Nitrogen use efficiency	all crops	Rovensa ANZ (Tradecorp)	Liquid	No	3.9	Molybdenum 7.7%, L-α free amino acids 6.4%, Phosphorus 6.4%, Total Nitrogen 3.3% (all w/w)	-
Biological PLUS	composite/blend	not registered	stress resistance	not registered	calcium acetate	not registered	soil biology/saline or sodic soils	all crops	SLTEC	liquid	No	6.0 - 8.0	20.0% molasses, 1.0% kelp, 0.3% Fulvic acid, 0.3% Fish, 0.1% B, 6.5% Ca, 1.8% S, 2% K,	-
Plant of Health Plant Assist	composite/blend	not registered	stress resistance	not registered	VAMs (not specified), <i>Trichoderma</i> spp., silica, zeolites, kelp, natural surfactant (saponins), humic and fulvic acids, natural rock minerals	not registered	enhanced fertiliser uptake, soil health, mycorrhizae	all mycorrhizal crops	Batphone Australia Pty Ltd, Queensland	granular/powd	No	-	not supplied	https://www.batphone.com.au/images/articles/Testimonials/BelleJardinTrialofPlantAssistMP9-1.pdf
Lipoguard	microbial	not registered	stress resistance	not registered	lipopeptides derived from bacterial strains (not specified)	not registered	biofungicide	all crops	Metagen Pty Ltd, Queensland	liquid	No	-	<1% (w/v) lipopeptides (pumilicidins, iturins, fengycyins) produced by <i>Bacillus amyloliquefaciens</i> strain LG01	-
RhizoVital 42	microbial	not registered	stress resistance	not registered	<i>Bacillus amyloliquefaciens</i> FZB 43	not registered	root system, disease resistance	all crops	AbiTEP GmbH, Germany	liquid	No	n/a	<i>Bacillus amyloliquefaciens</i> FZB42 2.5 x 10 ¹⁰ CFU/ml	http://www.ocp.com.au/
Sudo-Shield	microbial	not registered	stress resistance	not registered	<i>Pseudomonas fluorescens</i>	not registered	recovery from pathogen damage	all crops	Nutri-Tech Solutions (NTS)	granular	Yes	n/a	none provided	support in literature
Trichomight	microbial	not registered	stress resistance	not registered	<i>Trichoderma</i> spp.	not registered	crop health, stress tolerance	all crops	Novum Lifesciences, Queensland	liquid	Yes	6.5 - 7	not supplied	-
Foliacin	microbial	not registered	stress resistance	not registered	Fermentation extract and plant nutrients	not registered	Foliar health	all crops	BioStart	liquid	No	4	from label - enzymes, microbial signalling molecules, bacteriocins and secondary metabolites from the fermentation of beneficial bacteria and yeast; from manufacturer - Manganese, zinc, potassium, phosphorous, nitrogen, amino acids	https://biostart.com.au/wp-content/uploads/sites/4/2020/12/34072-Foliacin-Brochure-Aust-2018.pdf
Activave	plant extract	not registered	stress resistance	not registered	contains betaine, alginate, and caidrine, a derivative of vitamin K1	not registered	crop health	all crops	Valagro	liquid	No	6.4	Nitrogen 3%, Potassium 5.8%, Iron 0.5% Zinc 0.08%, Organic carbon (soluble in water) 12%	-
Bombardier	plant extract	not registered	stress resistance	not registered	Proprietary plant extracts	not registered	aid in adverse conditions: heat, cold, frost stress; soil constraints; disease pressure	All crops	Kimitec	liquid	Yes	5.5-7.5	29.6% fulvic acid, 16.6% free amino acids, 7.9% saccharides	https://sustainablefarming.com.au/trials-database/
Photon	plant extract	not registered	stress resistance	not registered	dicarboxylic acids	not registered	stress	all crops	Sipcam (Agricrop)	granular	No	7.5	500g/kg blend plant derived dicarboxylic acids	-
Liquid Kelp	seaweed extract	not registered	stress resistance	not registered	kelp extract	not registered	crop health, soil health	all crops	Eco Growth	liquid	Yes	n/a	not given	-
Seasol Commercial	seaweed extract	not registered	stress resistance	not registered	trace elements, alginates, carbohydrates from brown kelps	not registered	root growth (and enhanced fertiliser efficacy), improved tolerance to environmental and climatic stress	all crops including: capsicums, cucurbits, tomatoes, pumpkins, asparagus, brassicas, celery, herbs, lettuces, carrots, onions, potatoes, sweet potatoes	Seasol International	liquid	Yes	11.5 - 12.5	Nitrogen 0.2% w/v, Phosphorus 0.02%, Potassium 3.7%, Boron 15 mg/L, Calcium 458 mg/L, Iron 115 mg/L, Magnesium 972 mg/L, Manganese 2 mg/L, Silicon 56 mg/L, Sodium 6,820 mg/L, Sulphur 2,574 mg/L, Zinc 5 mg/L	-
Stress Buster	seaweed extract	not registered	stress resistance	not registered	polysaccharides, polyglutamic acid, osmolytes	not registered	crop health	all crops	Seawins	liquid	SXC certified	4-6	seaweed polysaccharides 10%, alginate 3%, fulvic acid 5%, polyglutamic acid 0.5%, amino acid 1%, total organic matter 15-20%	-
Cloak Spray Oil	composite/blend	not registered	wetting agent	not registered	canola oil, fish oil	not registered	product penetration	all crops	Nutri-Tech Solutions (NTS)	liquid	Yes	7 to 8	not supplied	-
Natural Wet	plant extract	not registered	wetting agent	not registered	saponin from <i>Yucca schidigera</i>	not registered	wetting	all crops	Zadco (JH Biotech)	liquid	Yes	n/a	Saponin 10%, Water 90%	-
Nutri-Stim saponins	plant extract	not registered	wetting agent	not registered	saponins	not registered	water tension	all crops	Nutri-Tech Solutions (NTS)	granular	Yes	n/a	Saponins 70%	-
